2
3  Question 1: What are conditional statements? Explain conditional statements with syntax and examples.
4
5  Ans: Conditional statements are programming constructs that allow you to make decisions in your code based on certain conditions.
   These statements execute different blocks of code depending on whether a given condition is true or false.
6
7  Types of Conditional Statements
8
9  1. if Statement: The if statement is the simplest form of a conditional statement. It executes a block of code only if the
   specified condition is true.
10
11 2. if else Statement: The if else statement provides an alternative block of code to execute if the condition is false.
12
13 3. else if Ladder: The else if ladder statement allows you to specify multiple alternative blocks of code to execute if the first
   condition is false.
14
15 Syntax as well as examples are shown below:
16
17 */
18
19 // if statement
20
21 let dividend = 10;
22
23 let divisor = 5;
24
25 if (divisor != 0) {
26
27     let result = dividend / divisor;
28
29     console.log("The result is: " + result);
30 }
31
32 // if else statement
33
```

```
34 let age = 16;
35
36 if (age >= 18) {
37
38     console.log("You are eligible to vote.");
39 }
40
41 else {
42
43     console.log("You are not eligible to vote.");
44 }
45
46 // else if ladder
47
48 let score = 85;
49
50 if (score >= 90) {
51
52     console.log("Grade A");
53 }
54
55 else if (score >= 80) {
56
57     console.log("Grade B");
58 }
59
60 else if (score >= 70) {
61
62     console.log("Grade C");
63 }
64
65 else {
66
67     console.log("Grade D");
68 }
```

script.js

```
1 // Question 2: Write a program that grades students based on their marks
2
3 let marks = 85;
4
5 if (marks > 90) {
6
7     console.log("A Grade");
8 }
9
10 else if (marks >= 70 && marks <= 90) {
11
12     console.log("B Grade");
13 }
14
15 else if (marks >= 50 && marks <= 70) {
16
17     console.log("C Grade");
18 }
19
20 else {
21
22     console.log("F Grade");
23 }
```

```
1  /*
2
3  Question 3: What are loops, and why do we need them? Explain different types of loops with their syntax and examples.
4
5  Ans: Loops are programming constructs that allow you to execute a block of code repeatedly until a certain condition is met. They
   are useful for tasks that require repetition, such as iterating over a collection of data.
6
7  Different types of loops include:
8
9  1. For Loop
10
11 2. While Loop
12
13 3. Do-While Loop
14
15 4. For-in Loop
16
17 5. For-of Loop
18
19 Sytax and Examples:
20
21 */
22
23 // For Loop
24
25 console.log("For Loop:");
26
27 for (let i = 0; i < 5; i++) {
28
29     console.log(i);
30 }
31
32 // While Loop
33
34 console.log("While Loop: ");
35
```

```
36 let i = 5;
37
38 while (i < 10) {
39
40     console.log(i);
41
42     i++;
43 }
44
45 // Do-While Loop
46
47 console.log("Do-While Loop: ");
48
49 let j = 15;
50
51 do {
52
53     console.log(j);
54
55     j++;
56
57 } while (j < 20);
58
59 // For-in Loop
60
61 console.log("For-in Loop: ");
62
63 const person = {name: "John", age: 30, city: "New York"};
64
65 for (let key in person) {
66
67     console.log(key + ": " + person[key]);
68 }
69
70 // For-of Loop
71
72 console.log("For-of Loop: ");
73
```

```
74 | let numbers = [2, 4, 6, 8, 10];  
75 |  
76 | for (let num of numbers) {  
77 |  
78 |     console.log(num);  
79 | }
```

script.js

```
1  /*
2
3  Question 4: Generate numbers between any 2 given numbers.
4
5  Example:
6
7  const num1 = 10;
8  const num2 = 25;
9
10 Output: 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25
11
12 */
13
14 const num1 = 10;
15
16 const num2 = 25;
17
18 for(let i = num1; i <= num2; i++){
19
20     console.log(i);
21 }
```

script.js

```
1  /*
2
3  Question 5: Use the while loop to print numbers from 1 to 25 in ascending and descending order.
4
5  */
6
7  console.log("Ascending Order:");
8
9  let i = 1;
10
11 while (i <= 25) {
12
13     console.log(i);
14
15     i++;
16 }
17
18 console.log("Descending Order:");
19
20 let j = 25;
21
22 while (j >= 1) {
23
24     console.log(j);
25
26     j--;
27 }
```
